About

I'm motivated and **detail-oriented** Junior QA Engineer with a solid understanding of Cypress, Postman and JavaScript, seeking an opportunity to kickstart a successful career in Software Quality Assurance.

While I may lack industry experience, I'm **open to challenge and growth**, I have a **true passion** for testing and programming (I regularly visit testing-related meetups and contribute to Github). I'm a **quick learner** and aim to follow the best practices. I know how to find solutions, write scripts for **automated tests**, and use **testing methodologies**. I have a **high empathy** which is beneficial for understanding user behavior and scenarios.

I don't need visa sponsorship.
I'm open for both in office and remote work.

Projects

☑ **UITAP** is a collection of Cypress-powered tests for UI Test Automation Playground.

☑ **My-Age-in-Days** is a tiny JS web app calculating how old you are in days.

☑ **codewars-solved** is a collection of solutions for Codewars katas
